INFORMATIONAL MEMORANDUM

TO: Dr. Veronica Hunnicutt, Chair of the Mayor’s Hunters Point Shipyard Citizens Advisory Committee
FROM: Tamsen Drew, Senior Project Manager
SUBJECT: Hunters Point Shipyard Environmental Remediation Update; Hunters Point Shipyard Redevelopment Project Area

On October 4, 2016 the Commission on Community Investment and Infrastructure (“Commission”) held a workshop on the remediation activities at Hunters Point Shipyard (the “Shipyard”). The staff memorandum for that Commission workshop is attached here as Exhibit A, and provides information on:

- The regulatory oversite for clean-up activities at the Shipyard;
- History of radiological uses at the Shipyard;
- Overview of radiologic clean-up goals at the Shipyard;
- Summary of previous Nuclear Regulatory Commission (“NRC”) investigations against the Navy’s contractor, Tetra Tech; and
- Summary of new allegations regarding Tetra Tech’s performance on the Shipyard.

Additional information has become available to the Office of Community Investment and Infrastructure (“OCII”) since the Commission hearing. Specifically, OCII and San Francisco Public Health Department (“SF DPH”) staff, requested that the U.S. Environmental Protection Agency (“U.S. EPA”) address concerns by members of the public relating to the potential current exposure to radiation for Shipyard residents, workers, and artists.

Residents at the Shipyard live in homes constructed on Parcel A, also known as the Hilltop. There are also artists and workers in buildings on the Navy owned property. Specifically, the Police Department Crime Lab is located in Building 606, on Parcel E-1. Artists occupy workspace studios in Building 101 and 110 on Parcel A as well as Buildings 104, 115, 116, 117, and 125 on Parcel B-1.

In regards to the public’s concerns, the U.S. EPA stated that: “We have no reason to question any cleanup work performed on Parcel A. To date no allegations have been made regarding the
integrity of any of the cleanup work conducted at Parcel A.” And additionally, “To date, no specific allegations have been made regarding the integrity of the cleanup work conducted specifically in areas of the artist studios or Building 606 that give us any reason to question EPA’s prior decision to approve the lease of these buildings.”

Both statements are attached to this memorandum as Exhibits B and C.

On November 3, 2016, Mayor Edwin Lee and Supervisor Malia Cohen received an update on the status of the investigations from the U.S. EPA, California Department of Toxic Substances Control (“DTSC”), and the Navy. At that meeting, the Navy committed to hiring an independent third party to review the status of the radiological remediation on the Shipyard. Specifically, the contractor will review all available data regarding the remediation of radiological material and recommend a comprehensive plan to the Navy and the regulatory agencies. It is anticipated that the contractor’s recommendations will available within 3-4 months.

All parties at the meeting recognized the importance of this work, and committed to dedicating staff and resources to addressing any uncertainty relating to radiological remediation quickly.

In addition, the following correspondence supplements the October 4, 2016 Commission memorandum, and are attached hereto:

- Leader Nancy Pelosi letter to Navy Secretary Ray Mabus and U.S. EPA Administrator McCarthy (October 17, 2016).
- **NEW** Leader Nancy Pelosi letter to Navy Secretary Ray Mabus and U.S. EPA Administrator McCarthy (November 22, 2016).
- **NEW** Dennis McGinn, U.S. Navy letter to Leader Nancy Pelosi (January 5, 2017).

Staff from OCII and SF DPH are available for any questions you or members of the public may have regarding the current state of the investigations.
Exhibit 7: Leader Nancy Pelosi letter to Navy Secretary Ray Mabus and U.S. EPA Administrator McCarthy (November 22, 2016).
In 1974 the U.S. Navy closed operations at the Hunters Point Shipyard ("Shipyard"), and in 1989 the U.S. Environmental Protection Agency ("US EPA") placed the Shipyard on the National Priorities List established under the federal Comprehensive Environmental Response, Compensation, and Liability Act ("CERCLA"). Following the Shipyard's designation as a superfund ("Superfund") site under CERCLA, in 1992 the Navy entered into a Federal Facilities Agreement ("FFA") with the Regulators (USEPA, California Department of Toxic Substances Control ("DTSC"), and the Bay Area Regional Water Quality Control Board). The FFA establishes a procedural framework and schedule for developing, implementing, and monitoring appropriate remediation actions at the Shipyard in accordance with CERCLA and other applicable state and federal laws. Under a conveyance agreement entered into between OCII and the Navy, after the Navy and the Regulators have concurred to a Finding of Suitability to Transfer ("FOST") for a land parcel within the Shipyard, the Navy will offer the property to OCII.

OCII and the City and County of San Francisco ("City") through the Department of Public Health ("DPH") and City Attorney's Office monitor the environmental remediation activities performed by the Navy in accordance with the CERCLA process to ensure that clean-up standards are met and the site is safe for the development and implementation of the Hunters Point Shipyard Redevelopment Plan ("Redevelopment Plan"). On issues where specific technical expertise is required and is not available through City or OCII staff, outside expert consultants are used.

In order to facilitate the remediation and transfer of land at the Shipyard, the Navy has divided the Shipyard into lettered parcels. At this time there are a total of 12 parcels (A, A-1, B-1, B-2, C, D-1, D-2, E-1, E-2, F, G, and IR7-18) and three utility corridors (UC-1, UC-2, and UC-3). These parcels cover approximately 492 land acres located along the southeastern waterfront in San Francisco. The Shipyard also includes 437 water acres off-shore, known as Parcel F. The Navy has defined
its parcels based on their environmental characteristics and the remedial actions needed. To date, Parcels A, A-1, D-2, UC-1, and UC-2 have transferred from the Navy to OCII. The next anticipated transfer from the Navy to OCII was anticipated to occur in 2017 and include Parcels B-1, G, and IR 7/18.

Among the cleanup actions the Navy has taken, in 2004, the Navy published the Final Historical Radiological Assessment ("HRA"), which was based on a decade of studies. As outlined in the HRA, there are two primary sources of radiation at Hunters Point Shipyard. The first source comes from the Shipyard's ship maintenance and repair activities from 1939 to 1974, which used radioactive luminescent (glow-in-the-dark) dials, gauges and signs. The second source of radiation comes from the use of the Shipyard as the Naval Radiological Defense Laboratory ("NRDL") from 1948 to 1969. The NRDL performed scientific studies on the effects of radiation on living organisms and equipment. In evaluating the effect on equipment, the NRDL undertook the decontamination of Naval ships involved in atomic testing.

The HRA identified radiologically impacted structures, storm drain and sewer systems, former disposal areas, piers, and ship berths. The Navy's radiological materials cleanup goal for the Shipyard is to obtain either Unrestricted Free-Release or, in certain circumstances, Restricted Release. Unrestricted Free-Release means that the property is free from any non-naturally occurring radiological contamination and the land may be used for any future use. Restricted Release is required in areas where radiologically contaminated soils or materials cannot be removed or the Navy has determined may be present in fill materials that cannot practically be removed. In these instances, to prevent exposure the Navy places controls such as covers, land-use restrictions (e.g. prohibiting residential uses), or activity restrictions (e.g. prohibiting digging below certain depths or growing edible plants).

In addition to the Regulators that are party to the FFA, DTSC has requested that the California Department of Public Health ("CDPH") assist it in overseeing the radiological clean up. These agencies participate in evaluating and approving clean-up goals, participating in radiological investigations and removal activities, and providing technical oversight and advice at the Shipyard. Additionally, the U.S. Nuclear Regulatory Commission ("NRC") provides oversight and annual inspections of the Shipyard's Radiological Program and radiological contractors works on the base.

The Navy has contracted with Tetra Tech EC, Inc. ("Tetra Tech") to assist with the cleanup and closure of the radiologically-impacted buildings at sites at the Shipyard. In 2014, the NRC started investigating Tetra Tech after the Navy identified discrepancies in some soil sample survey data. In July, the NRC imposed a $7,000 fine against Tetra Tech concluding:

> [T]wo Tetra Tech workers, who worked within NRC jurisdiction, deliberately falsified soil samples on a number of occasions in late 2011 through the summer of 2012. When tasked with obtaining soil samples to ascertain the amount of residual radioactivity in certain locations within Parcel C, the workers instead obtained soil samples from other areas that were suspected to be less contaminated and then created documents indicating the work had been done as expected. The company has since taken actions to prevent recurrence.3

2 U.S. Department of Navy, August 2004. *Hunters Point Shipyard Final Historical Radiological Assessment*  
3 See, Exhibit A, U.S. Nuclear Regulatory Commission Press Release, *NRC Proposes $7,000 Fine Against New*
In March 2016, a former Tetra Tech employee provided additional allegations regarding the clean-up of radiological materials on the Shipyard. Several federal and state agencies have initiated investigations into these new allegations, and subsequently, the EPA and DTSC issued a letter to the Navy in September memorializing that “the Navy will not propose any further transfer of Navy Property at [the Shipyard] without results of these investigations and/or any other Navy action necessary to clarify the actual potential public exposure to radioactive material...”\(^4\)

The scope and timeline of these investigations is currently unknown, and may result in significant delays to the transfer of property from the Navy to OCII. The City, in a letter from Mayor Edwin M. Lee and Supervisor Malia Cohen, is requesting a briefing on the status of these pending investigations from senior EPA officials.\(^5\) Staff will update the Commission as additional information becomes available.

Based on ongoing reviews of all the available information, the City's DPH continues to conclude there is no immediate health risk to workers, residents, and artists who currently access the site. DPH will continue to work with all concerned to ensure health and safety.

NRC Proposes $7,000 Fine Against New Jersey Company for Violations at San Francisco Shipyard

The Nuclear Regulatory Commission has cited Tetra Tech EC, Inc., for an apparent violation of NRC requirements that occurred at the U.S. Navy’s Hunter’s Point Naval Shipyard site in California. The agency has proposed a $7,000 fine.

Hunter’s Point is being remediated under the Comprehensive Environmental Response, Compensation, and Liability Act of 1980, with Environmental Protection Agency oversight. Tetra Tech was contracted by the Department of the Navy to assist with the regulatory free-release and closure of the radiologically-impacted buildings and sites at the shipyard, under the Navy’s Base Realignment and Closure mandate. The NRC has jurisdiction over the northeast portion of the shipyard. NRC oversight involves ensuring that contractors with NRC service provider licenses, such as Tetra Tech, are conducting remediation activities safely. NRC is not oversee the decommissioning of the site.

The Navy identified discrepancies in the soil sample survey data and Tetra Tech conducted an investigation to identify the inaccurate records. After the company reported the discrepancies to the NRC, an NRC investigation was conducted, which determined that two Tetra Tech workers, who worked within NRC jurisdiction, deliberately falsified soil samples on a number of occasions in late 2011 through the summer of 2012. When tasked with obtaining soil samples to ascertain the amount of residual radioactivity in certain locations within Parcel C, the workers instead obtained soil samples from other areas that were suspected to be less contaminated and then created documents indicating the work had been done as expected. The company has since taken actions to prevent recurrence.

Tetra Tech has been issued a notice of violation for failing to make surveys within Parcel C that were reasonable to evaluate concentrations of residual radioactivity in the soil.

“Although the NRC investigation did not find information to suggest buildings, land or materials were inappropriately released for unrestricted use, the failure to perform reasonable surveys is a significant concern because that potential did exist,” said Region I Administrator Dan Dorman.

Tetra Tech is not required to respond to the notice of violation because the company has already provided information on the reason for the violation and the actions taken to prevent recurrence. The company has 30 days to pay the proposed civil penalty or to request in writing that all or part of it be withdrawn.
July 28, 2016

EA-15-230

Mr. Andrew N. Bolt  
President  
Tetra Tech EC, Inc.  
1000 The American Road  
Morris Plains, New Jersey 07950

SUBJECT: TETRA TECH EC, INC., NOTICE OF VIOLATION AND PROPOSED IMPOSITION OF CIVIL PENALTY - $7,000 – NRC INVESTIGATION REPORT 1-2014-018

Dear Mr. Bolt:

This letter provides you the U.S. Nuclear Regulatory Commission’s (NRC’s) enforcement decision for the apparent violation identified during an NRC investigation of activities performed by Tetra Tech EC, Inc. (Tetra Tech) staff at the U.S. Navy’s Hunter’s Point Naval Shipyard (HPNS) site in San Francisco, California. The investigation was conducted to evaluate whether employees of Tetra Tech deliberately falsified soil sample surveys from the area referred to as ‘Parcel C’ at HPNS.

Based on the evidence gathered during the NRC investigation, the NRC concluded that between November 18, 2011, and June 4, 2012, two Tetra Tech employees deliberately falsified soil sample surveys taken to ascertain the amount of residual radioactivity in the soil. Specifically, a Radiation Task Supervisor (RTS) and a Radiation Control Technician (RCT) deliberately obtained soil samples from other areas that were suspected to be less contaminated and represented on related chain-of-custody records that the samples had been obtained from the specified locations. The actions of the RTS and RCT caused Tetra Tech to be in apparent violation of 10 CFR 20.1501(a) which requires, in part, that licensees make or cause to be made, surveys of areas that were reasonable to evaluate concentrations and potential radiological hazards of residual radioactivity.

The apparent violation was described in the NRC letter sent to you dated February 11, 2016 (ML16042A074).1 In the letter, we provided Tetra Tech the opportunity to accept the apparent violation, address the apparent violation by attending a pre-decisional enforcement conference (PEC), provide a written response to the apparent violation, or request Alternative Dispute Resolution (ADR) before we made our final enforcement decision. In a letter dated March 15, 2016 (ML16090A220), you provided a written response to the apparent violation in which you requested that a PEC be held with the NRC and provided information regarding Tetra Tech’s

---

1 Designation in parentheses refers to an Agency-wide Documents Access and Management System (ADAMS) accession number. Unless otherwise noted, documents referenced in this letter are publicly-available using the accession number in ADAMS.
A. Bolt

perspective on the apparent violation. Specifically, you acknowledged the apparent violation, but expressed that the apparent violation should be assessed at a Severity Level (SL) IV because it was self-reported and corrected by Tetra Tech and requested that the NRC reconsider the severity of the violation. A summary of the information provided in your March 15, 2016, letter and the NRC response, is provided in Enclosure 1.

On March 18, 2016, you requested to cancel the PEC and stated you would provide a second written response to address the willful actions associated with the violations. In a letter dated March 22, 2016 (ML16090A318), you provided your response which stated that you did not believe it was appropriate to find that Tetra Tech engaged in a willful violation when Tetra Tech appropriately identified the sampling areas and established the sampling protocols; and the RTS and RCT chose to ignore the protocols. The letter also stated that the proposed violation is contrary to actions the NRC has taken in other cases where employees have independently chosen to violate procedures mandated by their employers. A summary of the information provided in your letter and the NRC response, is provided in Enclosure 2.

Based on the information developed during the investigation, and the information that you provided in your March 15, 2016, and March 22, 2016, responses, the NRC has determined that a violation of NRC requirements occurred. The violation is cited in the enclosed Notice of Violation. The failure to make reasonable surveys within Parcel C at HPNS is of significant concern to the NRC because the potential existed for buildings, land, or materials at HPNS to be inappropriately released for unrestricted use. However, in this specific case, the likelihood of an inappropriate release was prevented because the U.S. Navy identified the survey discrepancies prior to releasing any buildings, land, or materials within Parcel C at HPNS for unrestricted use and Tetra Tech took corrective actions to properly sample the suspect areas.

Because the NRC determined that the actions of the RTS and the RCT were willful, this violation has been categorized in accordance with the NRC Enforcement Policy as a SL III violation. In accordance with the Enforcement Policy, a base civil penalty in the amount of $7,000 is considered for Severity Level III violations. The NRC considered whether credit was warranted for both Identification and Corrective Action in accordance with the civil penalty assessment process in Section 2.3.4 of the NRC Enforcement Policy. The NRC determined that identification credit was not warranted. Specifically, the NRC considered that, although Tetra Tech appropriately reported the issue to the NRC, the discrepancies in the surveys were identified by the U.S. Navy (Navy) after the soil sample survey results were submitted to the Navy for review. The NRC concluded that credit was warranted for Tetra Tech’s corrective actions taken to address the violation. Specifically, Tetra Tech: (1) required all the individuals directly involved in soil sample collection at HPNS to attend training on proper soil collection procedures; (2) required all individuals involved in the soil sample collection to attend training on ethical behavior; (3) resampled all twelve survey units where anomalous surveys had been discovered and remediated and resampled any survey units exhibiting activity concentrations exceeding the release criteria until all release criteria were met; (4) implemented a quality assurance process under which the HPNS Quality Control Team will independently conduct a surveillance of a minimum of 10% of final samples collections; and (5) implemented a protocol for the corporate RSO to be notified if sampling result trends are inconsistent with previous sampling results.
Therefore, to emphasize the importance of accurate and complete information and of prompt identification of violations, I have been authorized, after consultation with the Director, Office of Enforcement, to issue the enclosed Notice of Violation and Proposed Imposition of Civil Penalty (Notice) in the base amount of $7,000 for this Severity Level III violation. In addition, issuance of this Notice constitutes escalated enforcement action that may subject you to increased inspection efforts.

If you disagree with this enforcement sanction, you may deny the violation, as described in the Notice, or you may request alternative dispute resolution (ADR) with the NRC in an attempt to resolve this issue. ADR is a general term encompassing various techniques for resolving conflicts using a neutral third party. The technique that the NRC has employs is mediation. Mediation is a voluntary, informal process in which a trained neutral (the “mediator”) works with parties to help them reach resolution. If the parties agree to use ADR, they select a mutually agreeable neutral mediator who has no stake in the outcome and no power to make decisions. Mediation gives parties an opportunity to discuss issues, clear up misunderstandings, be creative, find areas of agreement, and reach a final resolution of the issues. Additional information concerning the NRC's ADR program can be found at http://www.nrc.gov/about-nrc/regulatory/enforcement/adr.html.

The Institute on Conflict Resolution (ICR) at Cornell University has agreed to facilitate the NRC's program as a neutral third party. If you are interested in pursuing this issue through the ADR program, please contact: (1) the ICR at (877) 733-9415; and (2) Raymond Powell, Chief, Decommissioning and Technical Support Branch at 610-337-6967 within 10 days of the date of this letter. You may also contact both ICR and Mr. Powell for additional information. Your submitted signed agreement to mediate using the NRC ADR program will stay the 30-day time period for payment of the civil penalties and the required written response, as identified in the enclosed notice, until the ADR process is completed.

The NRC has concluded that information regarding: (1) the reason for the violation; (2) the actions taken to correct the violation and prevent recurrence; and, (3) the date when full compliance was achieved, is adequately addressed on the docket in the two letters sent on the behalf of Tetra Tech dated March 15, 2016, and March 22, 2016, respectively, and in this letter. Therefore, you are not required to respond to this letter unless the description therein does not accurately reflect your corrective actions or your position. In that case, or if you choose to provide additional information, you should follow the instructions specified in the enclosed Notice.

In accordance with 10 CFR 2.390 of the NRC's "Rules of Practice," a copy of this letter, its enclosures, and your response, if you choose to provide one, will be made available electronically for public inspection in the NRC Public Document Room or from the NRC's document system (ADAMS), accessible from the NRC Website at http://www.nrc.gov/reading-rm/adams.html. To the extent possible, your response should not include any personal privacy,
proprietary, or safeguards information so that it can be made available to the Public without redaction.

The NRC also includes significant enforcement actions on its Web site at (http://www.nrc.gov/reading-rm/doc-collections/enforcement/actions/).

Sincerely,

/RA/

Daniel H. Dorman
Regional Administrator

NRC RESPONSE TO INFORMATION PROVIDED IN THE TETRA TECH EC, INC (TETRA TECH) LETTER DATED MARCH 15, 2016

SUMMARY OF TETRA TECH’S POSITION REGARDING THE SEVERITY OF THE VIOLATION

In a March 15, 2016, letter, Tetra Tech provided its perspective on the apparent violation for the NRC’s review and consideration prior to the NRC making its final enforcement determination. Tetra Tech acknowledged the apparent violation as documented in the NRC letter dated February 11, 2016; however, Tetra Tech stated that the severity of the violation should be assessed at a Severity Level (SL) IV because the issue was self-reported and self-corrected. Tetra Tech raised several points to support this view. These points, and the NRC response to each, are summarized below:

**Tetra Tech Point #1:**
At the time of the apparent violation, the Hunter Point’s Naval Station (HPNS) “Parcel C” worksite was not accessible to the public and is currently still not publicly available. The HPNS worksite has very low levels of contamination which are very near background levels and was never a threat to public health and safety as a result of this event. The NRC investigation also recognized that the soil sample issue did not present a risk to the public.

**NRC Response**
The NRC determined that the underlying apparent non-compliance in this case, the failure to make or cause to be made, surveys of areas that were reasonable to evaluate concentrations and potential radiological hazards of residual radioactivity, was a SL IV.

In accordance with the NRC Enforcement Policy, when assessing the appropriate enforcement response to a violation, the NRC considers four factors: (1) whether the violation resulted in actual safety consequence; (2) whether the violation had potential safety consequence; (3) whether the violation impacted the ability of the NRC to perform its regulatory function; and (4) whether the violation involved willfulness. In the Tetra Tech case, the NRC acknowledged that the violation did not result in an actual safety consequence and did not impact the NRC’s ability to perform its regulatory function. The NRC also recognized that at the time of the violation, HPNS was inaccessible to the public. However the NRC concluded that the apparent violation had potential consequences in that failing to conduct the appropriate soil sampling in accordance with the established procedures could have led to the inappropriate free-release of buildings, land, or materials within Parcel C at HPNS. An inappropriate free-release within Parcel C could have exposed the public to the contamination at HPNS.

In addition, the apparent violation was determined to be willful. In accordance with the NRC Enforcement Policy, willful violations are of particular concern because the NRC’s regulatory program is based on licensees and their contractors and employees acting with integrity and communicating with candor. Therefore, willful violations may be considered more significant than the underlying non-compliance. Because of the willful nature of the apparent violation, the NRC considered the apparent violation to be more appropriately characterized as a SL III.
**Tetra Tech Point #2:**
Tetra Tech self-reported that soil samples taken at HPNS were not representative of the area and that the samples were suspected to be taken from areas that were less contaminated. Additionally, Tetra Tech self-corrected the identified deficiencies.

**NRC Response**
The NRC recognizes that once the U.S. Navy (Navy) identified the discrepancies in the soil sample data, Tetra Tech reported the issue to the NRC and took appropriate corrective actions. However, in accordance with the NRC Enforcement Policy, credit for identification of an apparent violation and the corrective actions taken to address apparent violations are considered in the civil penalty assessment process. To determine the appropriateness of issuing a civil penalty, the NRC considers whether the violation is willful, if the licensee should be given credit for identification, and whether the licensee’s corrective actions were prompt and comprehensive. In the Tetra Tech case, because the violation was willful, the NRC considered whether credit was warranted for both identification and corrective action in accordance with the civil penalty assessment process. The NRC determined that identification credit was not warranted because the discrepancies in the surveys were identified by the Navy after the soil sample survey results were submitted to the Navy for review. The NRC concluded that credit was warranted for Tetra Tech’s corrective actions taken to address the violation.

**Tetra Tech Point #3**
The NRC informed Tetra Tech that the alleged misconduct was by a Radiation Task Supervisor (RTS) and a Radiation Control Technician (RCT). The NRC investigation did not conclude that anyone on Tetra Tech’s management team was involved in the misconduct. In response to identification of the discrepancies, Tetra Tech took the appropriate actions by conducting an investigation and taking corrective actions.

**NRC Response**
The NRC acknowledges that the NRC investigation concluded that the willful misconduct was conducted by the RTS and the RCT, and not Tetra Tech management. However, in accordance with the NRC Enforcement Policy, it is the NRC’s policy to hold licensees responsible for the acts of their employees and contractors, in most cases, the NRC will cite the licensee for violations committed by their employees and contractors. Therefore, in this case, because the RTS and the RCT engaged in deliberate misconduct that caused Tetra Tech to be in apparent violation 10 CFR 20.1501(a) and were employed by Tetra Tech, the NRC is holding Tetra Tech responsible for their actions. As mentioned above, the corrective actions taken to address the apparent violation was considered during the civil penalty assessment process and Tetra Tech was given credit for the actions taken to address the apparent violation.

**Summary**
The NRC staff reviewed Tetra’s Tech, written response to the apparent violation dated March 15, 2016. After careful consideration of the information provided by Tetra Tech in the letter, the NRC determined that the apparent violation should be assessed at a SL III.
SUMMARY OF TETRA TECH'S POSITION REGARDING THE WILLFUL ASPECTS OF THE VIOLATION

In a March 22, 2016, letter, Tetra Tech provided its perspective on the willful aspects of the apparent violation for the NRC's review and consideration prior to the NRC making its final enforcement determination. Tetra Tech believes that it is inappropriate to conclude that Tetra Tech acted willfully because the willful acts were conducted by a Radiation Control Technician (RCT) and the Radiation Task Supervisor (RTS) rather than Tetra Tech management. Tetra Tech raised several points to support this view. These points, and the NRC response to each, are summarized below:

Tetra Tech Point #1:
In this case, Tetra Tech did not act willfully in evading radiation protocols. Tetra Tech had protocols in place that the RCT and the RTS apparently chose to ignore. In this type of case, it does not appear appropriate to find that Tetra Tech, as compared with the two individuals, engaged in a "willful" violation. This is especially true in light of the fact that the events that gave rise to the proposed violation run counter to Tetra Tech's own procedures, protocols, and the strong safety culture that Tetra Tech maintained at HPNS.

NRC Response
As mentioned in the response to Tetra Tech Point #3 in Enclosure 1, it is the NRC's policy to hold licensees responsible for the acts of their employees and contractors and, in most cases, the NRC will cite the licensee for violations committed by their employees and contractors.

Tetra Tech Point #2:
Tetra Tech believes that the proposed violation in this case is contrary to actions the NRC has taken in other cases where employees have independently chosen to violate procedures mandated by their employers. For example, in the matters of Larry Yeates (IA-15-026) and Mickey Lovell (IA-15-028), the NRC concluded that two individuals had committed Severity Level III violations by ignoring procedures at the Monticello Nuclear Generating Plant (EA-14-193). Following mediation, and the agreement of the licensee to take certain actions, including corrective actions, the NRC refrained from issuing a Notice of Violation to the licensee and also did not impose a fine.

NRC Response
The Monticello Nuclear Generating Plant (Monticello) case involved an NRC investigation that was initiated to determine whether two contractors failed to follow procedural requirements while performing non-destructive examinations on dry shielded canister confinement boundary welds in accordance with Technical Specification requirements, and falsified non-destructive examination report forms. In the Monticello case, the NRC determined that the individuals involved deliberately violated Monticello procedural requirements and falsified report forms which caused Monticello to be in violation of NRC requirements. Similar to Tetra Tech, Monticello was given the options to: (1) provide a written response to the NRC; (2) request a Predecisional Enforcement Conference (PEC), or (3) request Alternative Dispute Resolution (ADR). In response to the choices offered, Monticello elected to participate in ADR. The outcome of ADR is a confirmatory order that formalizes the agreements reached during the
mediation session. The confirmatory order issued in the Monticello case included submitting a project plan to reach compliance with NRC regulations and developing and making a presentation based on the facts and lessons learned from the events that gave rise to the confirmatory order (ML15355A459). In this case, Tetra Tech was also issued a choice letter with the same options. Tetra Tech still has the option to request ADR.

Summary
The NRC staff reviewed Tetra Tech’s written response to the apparent violation dated March 22, 2016. After careful consideration of the information provided by Tetra Tech in the letter, the NRC’s position is unchanged.
NOTICE OF VIOLATION
AND
PROPOSED IMPOSITION OF CIVIL PENALTY

Tetra Tech EC, Inc.  Docket No. 03038199
Morris Plains, New Jersey  License No. 29-31396-01
EA-15-230

During an NRC investigation conducted between April 29, 2014, and September 17, 2015, a violation of NRC requirements was identified. In accordance with the NRC Enforcement Policy, the NRC proposes to impose a civil penalty pursuant to Section 234 of the Atomic Energy Act of 1954, as amended (Act), 42 U.S.C. 2282, and 10 CFR 2.205. The particular violation and associated civil penalty are set forth below:

10 CFR 20.1501(a) requires that each licensee shall make or cause to be made, surveys of areas, including the subsurface, that may be necessary for the licensee to comply with regulations in 10 CFR Part 20 and are reasonable under the circumstances to evaluate the magnitude and extent of radiation levels, concentrations or quantities of residual radioactivity, and the potential radiological hazards of the radiation levels and residual radioactivity detected.

10 CFR 20.1003 defines survey to mean an evaluation of the radiological conditions and potential hazards incident to the production, use, transfer, release, disposal, or presence of radioactive material or other sources of radiation. When appropriate, such an evaluation includes a physical survey of the location of radioactive material and measurements or calculations of concentrations or quantities of radioactive material present.

10 CFR 20.1402 requires, in part, that a site be considered acceptable for unrestricted use if the residual radioactivity that is distinguishable from background radiation results in a TEDE to an average member of the critical group that does not exceed 25 mrem (0.25 mSv) per year, including that from groundwater sources of drinking water, and the residual radioactivity has been reduced to levels that are as low as reasonably achievable (ALARA).

Contrary to the above, on several occasions between November 18, 2011, and June 4, 2012, Tetra Tech did not make or cause to be made surveys that were reasonable to evaluate concentrations or quantities of residual radioactivity and the potential radiological hazards of the residual radioactivity in the soil in Parcel C at Hunter’s Point Naval Shipyard. Specifically, when obtaining soil samples to ascertain the amount of residual radioactivity in specific locations within Parcel C, Tetra Tech employees obtained soil samples from other areas that were suspected to be less contaminated and represented that the samples had been obtained from within the specified locations. As a result, it could have appeared that residual radioactivity within the specific locations in Parcel C was lower than it actually was.

This is a Severity Level III violation. (Enforcement Policy Section 6.3)
Civil Penalty - $7,000 (EA-15-230)
The NRC has concluded that information regarding: (1) the reason for the violation; (2) the actions taken to correct the violation and prevent recurrence; and (3) the date when full compliance was achieved, are already adequately addressed on the docket in the letters from Tetra Tech EC, Inc. dated March 15, 2016, and March 22, 2016, and in the letter transmitting this Notice. Therefore, you are not required to respond to the violation unless the description therein does not accurately reflect your corrective actions or your position. If the docketed information does not accurately reflect your corrective actions or your position, you are required to submit a written statement or explanation pursuant to 10 CFR 2.201. In that case, or if you choose to respond, clearly mark your response as a "Reply to a Notice of Violation EA-15-230," and send it to the U.S. Nuclear Regulatory Commission, ATTN: Document Control Desk, Washington, DC 20555-0001 with a copy to the Regional Administrator, Region I, 2100 Renaissance Boulevard, Suite 100, King of Prussia, PA 19406, within 30 days of the date of the letter transmitting this Notice of Violation (Notice).

The Licensee may pay the civil penalty proposed above in accordance with NUREG/BR-0254, “Payment Methods,” and by submitting to the Director, Office of Enforcement, U.S. Nuclear Regulatory Commission, a statement indicating when and by what method payment was made, or may protest imposition of the civil penalty in whole or in part, by a written answer addressed to the Director, Office of Enforcement, U.S. Nuclear Regulatory Commission, within 30 days of the date of this Notice. Should the Licensee fail to answer within 30 days of the date of this Notice, the NRC will issue an order imposing the civil penalty. Should the Licensee elect to file an answer in accordance with 10 CFR 2.205 protesting the civil penalty, in whole or in part, such answer should be clearly marked as an "Answer to a Notice of Violation" and may: (1) deny the violation listed in this Notice, in whole or in part; (2) demonstrate extenuating circumstances; (3) show error in this Notice; or (4) show other reasons why the penalty should not be imposed. In addition to protesting the civil penalty in whole or in part, such answer may request remission or mitigation of the penalty.

In requesting mitigation of the proposed penalty, the response should address the factors addressed in Section 2.3.4 of the Enforcement Policy. Any written answer addressing these factors pursuant to 10 CFR 2.205 should be set forth separately from the statement or explanation provided pursuant to 10 CFR 2.201, but may incorporate parts of the 10 CFR 2.201 reply by specific reference (e.g., citing page and paragraph numbers) to avoid repetition. The attention of the Licensee is directed to the other provisions of 10 CFR 2.205 regarding the procedure for imposing civil penalty.

Upon failure to pay any civil penalty which subsequently has been determined in accordance with the applicable provisions of 10 CFR 2.205 to be due, this matter may be referred to the Attorney General, and the penalty, unless compromised, remitted, or mitigated, may be collected by civil action pursuant to Section 234c of the Act, 42 U.S.C. 2282c.

The responses noted above, i.e., Reply to Notice of Violation, Statement as to Payment of Civil Penalty, and Answer to a Notice of Violation, should be addressed to the Director, Office of Enforcement, U.S. Nuclear Regulatory Commission, One White Flint North, 11555 Rockville Pike, Rockville, MD 20852-2738, with a copy to the Regional Administrator, U.S. Nuclear Regulatory Commission, Region I, 2100 Renaissance Boulevard, King of Prussia, PA, 19106, and the Document Control Center, Washington, DC 20555-0001.
If you choose to respond, your response will be made available electronically for public inspection in the NRC Public Document Room or from the NRC’s document system (ADAMS), accessible from the NRC Web site at http://www.nrc.gov/reading-rm/adams.html. Therefore, to the extent possible, your response should not include any personal privacy or proprietary information so that it can be made available to the public without redaction. If personal privacy or proprietary information is necessary to provide an acceptable response, then please provide a bracketed copy of your response that identifies the information that should be protected and a redacted copy of your response that deletes such information. If you request that such material is withheld from public disclosure, you must specifically identify the portions of your response that you seek to have withheld and provide in detail the bases for your claim (e.g., explain why the disclosure of information will create an unwarranted invasion of personal privacy or provide the information required by 10 CFR 2.390(b) to support a request for withholding confidential commercial or financial information). If safeguards information is necessary to provide an acceptable response, please provide the level of protection described in 10 CFR 73.21.

In accordance with 10 CFR 19.11, you are required to post this Notice within two working days of receipt.

Dated this 28th day of July, 2016.
September 13, 2016

Lawrence Lansdale, Environmental Director
Naval Facilities Engineering Command (NAVFAC)
Base Realignment and Closure (BRAC) Program Management Office West
Department of the Navy
33000 Nixie Way, Building 50
San Diego, CA  92147

Dear Mr. Lansdale:

Thank you for the meeting on July 14, 2016, at the Region 9 office of the U.S. Environmental Protection Agency (EPA) regarding Navy’s cleanup of radioactive material at the Hunters Point Naval Shipyard (HPNS) in San Francisco, California. As we stated then, integrity of the data from the Navy’s contractor Tetra Tech ECI, Incorporated, (Tetra Tech) is of the utmost importance in ensuring the cleanup decisions are made in a manner that protects public health and the environment and complies with requirements of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA).

We understand that several agencies are currently engaged in ongoing investigations regarding the nature and extent of Tetra Tech’s misrepresentation of data delivered to the Navy. I am confirming that we agreed in the July 14, 2016, discussion, that the Navy will not propose any further transfers of Navy property at HPNS without results of these investigations and/or any other Navy action necessary to clarify the actual potential public exposure to radioactive material at and near the HPNS.
If you have any questions or comments about the Hunters Point Naval Shipyard cleanup, please contact either of the undersigned if you would like to discuss this matter further.

Sincerely,

Angela Herrera, Assistant Director
Federal Facilities Branch, Superfund Division
U.S. Environmental Protection Agency
Region IX
(415) 972-3144

Janet Naito, Branch Chief
Department of Toxic Substances Control

Alec Naugle and Tina Low, Regional Water Quality Control Board
September 19, 2016

Administrator Gina McCarthy
U.S. Environmental Protection Agency
1200 Pennsylvania Avenue, N.W.
Washington, DC 20460

Dear Administrator McCarthy:

It has come to our attention that, due to ongoing investigations regarding the integrity of data delivered by Tetra Tech to the Navy, the transfer of Navy property at Hunters Point Naval Shipyard to the City and County of San Francisco may be delayed.

The safety of our residents and workers is paramount, and we are committed to a thorough cleanup at the Hunters Point Naval Shipyard. This cleanup must be done in a way that protects the public health of our residents and the environment, and we are very supportive of the Environmental Protection Agency and the California Department of Toxic Substance Control undertaking a full review of any questionable data in furtherance of comprehensive cleanup.

San Francisco will not accept the transfer of any land until federal and state regulators are satisfied that the land is clean and safe, and our own Department of Public Health validates that decision.

The environmental cleanup of the property is a critical first step in the process of developing Hunters Point Shipyard – a project that will deliver desperately needed housing and long-overdue public benefits to the Hunters Point community. For that reason, we are requesting a briefing with senior Environmental Protection Agency leadership, confidential if necessary, so that we may better understand the scope and timelines of the investigations, and any potential impacts to the overall schedule for the delivery of these public benefits.

Sincerely,

Edwin M. Lee
Mayor, City & County of San Francisco

Malia Cohen
Supervisor, District 10

Naval Facilities Engineering Command
Barbara Garcia, Director, San Francisco Department of Public Health
Parcel A of the Former Hunters Point Naval Shipyard ("Shipyard"):

The information below addresses questions about potential current exposure to radiation at Parcel A. Here is what EPA knows about the history and cleanup of Parcel A that led to the removal of this portion of the Shipyard property from the Superfund National Priorities List and to approve the Navy’s transfer of Parcel A to the City of San Francisco:

- We have no reason to question any cleanup work performed on Parcel A. To date no allegations have been made regarding the integrity of any of the cleanup work conducted at Parcel A.

- Historically, the majority of Parcel A was used for residences and administrative offices, not industrial activities.

- The only radiological materials found at Parcel A were sandblast grit and firebricks. These have been removed. Former Buildings 322, 816, and 821 had potential for radiological contamination. The Navy scanned all three buildings and did not find radiological contamination above required cleanup levels. Buildings 322 and 816 were demolished and removed. Building 821 is located on Crisp Road, not in the developed portion of Parcel A. No other sources of radiological contamination were identified during the investigation or cleanup of Parcel A.

- In 2002, EPA conducted a radiological scanner van survey of Parcel A and navigable roads on other parts of the Shipyard. All of the anomalies detected during the scan were attributable to natural occurring sources at levels consistent with what would normally be found in the environment.

- Parcel A was removed from the Superfund National Priorities List in 1999 and was transferred in 2004. If it would be helpful, EPA can provide copies of the Finding of Suitability to Transfer and the de-listing decision.

The Navy is the lead agency responsible for the investigation and cleanup of the Shipyard and holds the Administrative Record for the site. EPA and its state regulatory agency partners oversee and enforce Navy compliance with Superfund requirements to ensure the cleanup at the Shipyard protects human health and the environment. For more information on the Shipyard investigation and cleanup, contact Derek Robinson, Navy Base Realignment and Closure (BRAC) Environmental Coordinator: 619-524-6026, derek.j.robinson1@navy.mil. If you would like to discuss EPA’s oversight role, please contact Lily Lee at 415-947-4187 or lee.lily@epa.gov or contact Jackie Lane at 415-972-3236 or lane.jackie@epa.gov.

October 2, 2016
Parcel B Artist Studios (Buildings 104, 115, 116, 117, 125) and the City/County of San Francisco Police Department (Building 606) of the Hunters Point Naval Shipyard

This information addresses concerns about potential current exposure to radiation at the above locations on the Hunters Point Naval Shipyard site. Below is what EPA knows about the history and cleanup at these locations that led to our approval for the lease of these areas:

- To date, no specific allegations have been made regarding the integrity of the cleanup work conducted specifically in areas of the artist studios or Building 606 that give us any reason to question EPA’s prior decision to approve the lease of these buildings.

- The current artist studios on Parcel B had formerly been used for barracks, schools, a cafeteria, and other non-industrial uses. Therefore, EPA has never had concerns about radiological impacts in these buildings. The Navy has removed sanitary sewer and storm drain lines near these buildings.

- Before Building 606 was constructed, Building 503 had been located in its place and had the potential for radiological impact. The Navy has removed sanitary sewer and storm drain lines and soil under and near Building 606. The Navy scanned soil from beneath Building 606 and found no elevated radiation levels.

- In 2002, EPA conducted a radiological scanner van survey of navigable roads on parts of the Shipyard including near the Artist Studios and Building 606. All of the anomalies detected during the scan were attributable to natural occurring sources at levels consistent with what would normally be found in the environment.

- EPA and other regulatory agencies found Buildings 104, 115, 116, 117, 125, and 606 suitable for lease in 2008. If it would be helpful, we can provide copies of the Finding of Suitability to Lease.

The Navy is the lead agency responsible for the investigation and cleanup of the Shipyard and holds the Administrative Record for the site. EPA and its state regulatory agency partners oversee and enforce Navy compliance with Superfund requirements to ensure the cleanup at the Shipyard protects human health and the environment. For more information on the Shipyard investigation and cleanup, contact Derek Robinson, Navy Base Realignment and Closure (BRAC) Environmental Coordinator: 619-524-6026, derek.j.robinson1@navy.mil. If you would like to discuss EPA’s oversight role, please contact Lily Lee, EPA project manager at 415-947-4187 or lee.lily@epa.gov or Jackie Lane, EPA Community Involvement Coordinator at 415-972-3236 or lane.jackie@epa.gov.

75 Hawthorne Street  
San Francisco, CA  94105-3901

Janet Naito  
Department of Toxic Substances Control  
700 Heinz Ave., Bldg. F, Suite 200  
Berkeley, CA. 94710-2721

Dear Ms. Herrera and Ms. Naito:

Thank you for your letter of September 13, 2016, confirming our common understanding of the Department of the Navy’s environmental process prior to any property transfer at the Former Hunters Point Naval Shipyard (HPNS).

Because there was a release or disposal of hazardous materials at the HPNS property, the Navy will prepare a Finding of Suitability to Transfer (FOST) which summarizes how the requirements and notifications for hazardous substances, petroleum products and other regulated materials on the property have been satisfied and that the property is suitable for transfer by deed. As always, upcoming FOSTs will be reviewed by the appropriate federal and state regulatory agencies before property transfer occurs.

We look forward to continuing our collaborative relationship on the cleanup of HPNS toward the ultimate goal of property transfer and safe redevelopment.

If you have further questions regarding this matter, please feel free to call me at (619)524-5789.

Sincerely,

October 17, 2016

The Honorable Ray Mabus  
Secretary of the Navy  
1000 Navy Pentagon  
Washington, D.C. 20350

The Honorable Gina McCarthy  
Administrator of Environmental Protection  
1200 Pennsylvania Avenue, NW  
Washington, D.C. 20460

Dear Secretary Mabus and Administrator McCarthy:

Thank you for your support for the remediation and transfer of the former Hunters Point Naval Shipyard Superfund site. I am writing regarding concerns with the integrity of data delivered by Navy contractor Tetra tech, and its implications for the safe and timely cleanup of the Shipyard.

As stated by San Francisco Mayor Ed Lee and Supervisor Malia-Cohen, the safety of residents and workers is paramount; and this cleanup must do everything to protect public health and the environment. Accurate data is a crucial component to ensure this cleanup meets those standards, and to ensuring the necessary trust that this land will be clean and safe.

I strongly support the request by San Francisco for a timely meeting of senior leadership of agencies and regulators involved in the Hunters Point cleanup to understand the scope and timeliness of the investigations, agree on a plan of action to ensure safety and trustworthiness, and to understand potential impacts to the project’s schedule.

The safe and timely environmental cleanup of the site is a pressing issue of environmental justice for the surrounding Bayview/Hunters Point community and the critical first step to the development of badly-needed housing and public benefits.

Thank you for your attention to this immediate concern.

best regards,

NANCY PELOSI
Member of Congress
November 22, 2016

The Honorable Ray Mabus  
Secretary of the Navy  
1000 Navy Pentagon  
Washington, D.C. 20350

The Honorable Gina McCarthy  
Administrator of Environmental Protection  
1200 Pennsylvania Avenue, NW  
Washington, D.C. 20460

Dear Secretary Mabus and Administrator McCarthy:

Thank you for honoring my October 17th request for a senior leadership meeting with Mayor Lee and Supervisor Cohen to discuss the safe and timely cleanup of the Hunters Point Naval Shipyard. I am writing to memorialize the understanding reached at that meeting to mitigate concerns about the integrity of data and its implications to the project’s timeline.

As discussed, safety is paramount and this cleanup must protect public health and the environment. While ensuring safety, this process must also be handled in the most expeditious manner to minimize schedule disruptions to allow for the swift cleanup and transfer of land to be redeveloped into urgently-needed housing, especially affordable housing.

A key element to achieving swift progress will be the ‘Tiger Team’ of experts from the relevant regulatory agencies. I strongly urge the support of San Francisco’s request for a surge of personnel, and the recent $7 million appropriations plus-up for Hunters Point secured in the Continuing Resolution should ensure sufficient resources to devote the appropriate staffing.

One area for improvement must be in open communication. I was disappointed by the late notification of the incident which led to this need for delay and potential restesting of data. The Congressional delegation, City and County of San Francisco, and the citizens of the Bayview Hunters Point neighborhood always deserve to know the full facts without delay. The commitment to regular progress updates for the city and robust community engagement are essential to ensure ongoing trust in the cleanup process.

Thank you for your continued attention to this immediate concern.

best regards,

NANCY PELOSI

Dear Mayor Lee and Supervisor Cohen:

Thank you for your letter of September 19, 2016, to EPA Administrator Gina McCarthy regarding the integrity of data delivered by Tetra Tech to the Navy at the Hunters Point Naval Shipyard.

You requested a briefing with senior EPA leadership from our Regional Office. Our Superfund Division Director, Enrique Manzanilla, and I would be happy to meet with you to discuss EPA’s oversight of the Shipyard cleanup and transfer process. Lily Lee, EPA’s Remedial Project Manager for the site has been in touch with Nicole Elliot, Director of Intergovernmental Affairs in the Mayor’s Office, to work out the timing and location for this briefing. Ms. Elliot asked for a week or two to finalize the participants and logistics.

We share your interest in the integrity of data to support sound cleanup decisions, and look forward to the briefing.

Sincerely,

Deborah Jordan  
Acting Deputy Regional Administrator

The Honorable Nancy Pelosi  
House of Representatives  
Washington, DC 20515  

Dear Representative Pelosi:  

Thank you for your letter of November 22, 2016, to the Secretary of the Navy, regarding the Hunters Point Naval Shipyard. I am responding on behalf of the Secretary.  

We were pleased to participate in the November 2, 2016 and December 15, 2016 senior leadership meetings with Mayor Lee and Supervisor Cohen and are focused on resolving data uncertainty and ensuring the property is safely transferred. We have committed resources to serve on a ‘Tiger Team’ with the relevant regulatory agencies and have a contract with independent experts to evaluate radiological data collected by Tetra Tech at Hunters Point. We are hopeful that a timely and collaborative decision-making process and focused effort by the regulatory agencies will expedite reevaluation of the data. We will share our incremental progress as we move through the process and understand the urgency in getting to a successful transfer in support of redevelopment efforts. The additional appropriations plus-up is appreciated and will help support our efforts.  

I agree that open communication is paramount to the success of the cleanup and conveyance of the Hunters Point Naval Shipyard. We are also enhancing our community involvement plan to ensure the public is apprised of the facts throughout the process, and are committed to monthly briefings with Mayor Lee and Supervisor Cohen.  

Again, I appreciate you taking the time to share your thoughts on this issue. If my office can be of any further assistance, please contact Ms. Laura Duchnak, Director, BRAC Program Management Office, laura.duchnak@navy.mil, (619) 524-6859.  

Sincerely,
